// 918Q Alarm Box

// PAL-AT Continuous Cable System

// Low Point Leak Detection System

918Q Alarm Box

For a simple and low-cost leak detection alarm system, our 918Q Alarm Box is the product of choice for detecting leakages in a double-contained piping system. The alarm box handles up to four sensor signals with the ability to sound an alarm in the event of a leak. In a typical installation, sensor signals (input devices) are installed at the low point of a double-contained piping system. When the liquid triggers the sensor (e.g., level switch), a signal is sent to the alarm box. The alarm box can be used with Georg Fischer’s Double-See, Contain-It, and Fuseal Squared double-contained piping systems.

The alarm box is sold separately from our polypropylene level switch offering.

Part No.	Description
150 240 001	918Q Alarm Box

Features

- Handles up to four sensor signals
- Audible and visual alarm indicators
- Replaceable lithium batteries
- Compliance with UL 913 and CSA 157 safety standards
- 90 dB alarm sounds at four feet away
- Low battery visual indicator

Advantages

- Economical
- Space-saving
- Ease of installation
- 500-ft maximum distance from sensor to box
- Configured to respond to either “normally open” or “normally closed” contacts

Sample Application

PAL-AT Continuous Cable Leak Detection System

For continuous leak detection, Georg Fischer offers the PAL-AT continuous cable leak detection system. PAL-AT is a micro-processor system with multi-sensing and remote monitoring capabilities. The presence of liquids to “wet” the cable will cause a change of the reflection at that specific location. When the system recognizes the change, it will enter into alarm mode and creates a new “map”. This will then become the base line for the system, allowing PAL-AT to continue monitoring the cable for growing leaks, new leaks, breaks, shorts and/or faults. The system is capable of monitoring up to four separate sensing zones each having up to 7,500 ft. of sensor cable. The versatility of the PAL-AT makes it ideal for Georg Fischer’s Double-See, Contain-It and Fuseal Squared double contained piping systems.

Part No.	Cable Capacity	Maximum Cable Range (ft.)
150 000 061	1	3000
150 000 064	1	7500
150 000 065	4	7500

Features

- Locates multiple leaks without loss of accuracy or sensitivity
- Detects growing leaks
- Locates breaks and shorts to reduce downtime
- Stores information with time and date
- Monitors for leaks up to location of breaks/shorts
- Ethernet and RS-232/RS-485 serial ports
- Accepts probe and cable sensors in one sensor string
- Able to commission system with limited initial lengths of wet cable
- Not susceptible to dust/dirt contamination of the sensor string
- Zener barrier panel (ZBP) provides intrinsically safe sensor cable output circuits for hazardous locations:
 - Class I, Division 1, Groups C & D Zone 0, Group IIB
- Modbus TCP, RTU, and RTU over TCP protocols

Advantages

- Wet cable start-up and multiple leak locations
- Monitor up to four separate sensing zones
- Low-power installation
- System archives
- Security system
- UL listed, CE compliance, and EPA third-party tested

Sample Application

Low Point Leak Detection System

Georg Fischer's 12-point leak detection system uses 12 discrete inputs for individual point leak detection. This allows for pinpointing a leak to a specific connection point in the double-contained piping system.

When the liquid triggers the sensor at a specific point, the indicator lamp illuminates the corresponding alarm point light. The alarm output also activates, allowing for external alarm notification. The leak detection system includes two RS-232 and one RS-485 communication ports for communications within a building automation system.

This 12-point leak detection system can be used with Georg Fischer's Double-See, Contain-It, and Fuseal Squared double-contained piping systems.

The leak detection system is sold separately from the sensors, allowing for customizing and combining of different sensors based on the specific applications.

Part No.	Description
150 00 0060	Low Point Leak Detection System

Features

- 12-point leak detection system
- 14" x 12" NEMA 4 enclosure with locking latches
- Internal fusible breaker for power protection.
- 12 red LED indicators for leak detection at specific points
- RS485 communications for building automation
- Alarm output terminals for remote alarm indication
- Optional audible alarm available
- Accepts a wide variety of leak detection sensors

Advantages

- Economical
- Ease of installation
- Output functionality
- Available in more than 12 points
